# Introduction

This user guide offers full startup and use instructions for Digital Twin Studio (SimTrack) at the  facility, including registering devices on the Power Packet portal, adding devices to the Modbus, and adding entities for utilization tracking.

# Base Navigation

**Asset Tracking** and **Utilization** pages may be accessed from the home page.

# Asset Tracking

Displays asset quantity, locations, and general information about each asset.

## Asset Lookup

To view a list of assets by location, select the location from the dropdown menu under **Locations**. Dropdown menus are accessible via the arrows next to location names. Use the text fields to search assets via their UPI/asset tag, badge number, or description. Select **Lookup** to view results.

## Asset Count by Type

Displays total asset quantity by selected location.

# Utilization Tracking

Select **Utilization** from the home page.

## System Summary

Displays total number of assets and average utilization among them as a percentage.

## Reporting

Displays asset utilization according to the following categories:

*Utilization per Location*

*Utilization by Time*

*Utilization by Date*

## Average Overall Utilization

Average Overall Utilization from the **Summary** section is broken down here into graphs displaying utilization over periods of seven and 30 days.

# System

## RFID Monitor

Monitors the RFID readers active at a given site. A green box indicates a reader is connected and running, a red box indicates the reader is either off or disconnected. *Last 30 Read Tags* displays a list of recently read tags. *IPs Overview* displays the statuses and connection records of the RFID readers associated with each IP address.

The screenshot shows the SimTrack RFID Monitor interface. At the top, there is a navigation bar with 'Home', 'System', 'Entity Control', 'SimTrack Login', and 'Utilization'. The main title is 'RFID MONITOR' with a 'GO BACK' link. Below this, there are six status boxes for different RFID readers:

- RB\_SpecialLabs\_S\_Cor At 10.246.124.105**: Status: Connected (Green box, Last Update: Jan 26 2022 2:09PM)
- RB\_2\_225\_5\_Corridor At 10.246.124.107**: Status: Disconnected (Red box, Last Update: Jan 26 2022 3:04PM)
- RB\_2\_225\_Lab At 10.246.124.109**: Status: Connected (Green box, Last Update: Jan 26 2022 3:09PM)
- RB\_SpecialLabs\_N\_Cor At 10.246.124.106**: Status: Connected (Green box, Last Update: Jan 26 2022 3:09PM)
- RB\_2\_225\_N\_Corridor At 10.246.124.108**: Status: Connected (Green box, Last Update: Jan 26 2022 3:07PM)
- At 10.246.124.110**: Status: Disconnected (Red box, Last Update: Jan 11 2022 1:40PM)

Below the status boxes, there are two tables:

**Last 30 Read Tags**

Tag	Location	Model	Last Update	Speed	Direction
No records found					

**IPs Overview**

IP	Status	Last Updated	Message
10.72.9.228	Connected	7/6/2022 1:03:00 AM	Client at 10.72.9.228 has been connected
10.72.9.228	Connected	7/6/2022 1:02:50 AM	Client at 10.72.9.228 has been connected
10.72.9.228	Connected	7/6/2022 1:02:40 AM	Client at 10.72.9.228 has been connected
10.72.9.228	Connected	7/6/2022 1:02:17 AM	Client at 10.72.9.228 has been connected

## Power Monitoring

Additional readers or power monitors may be added from this page.

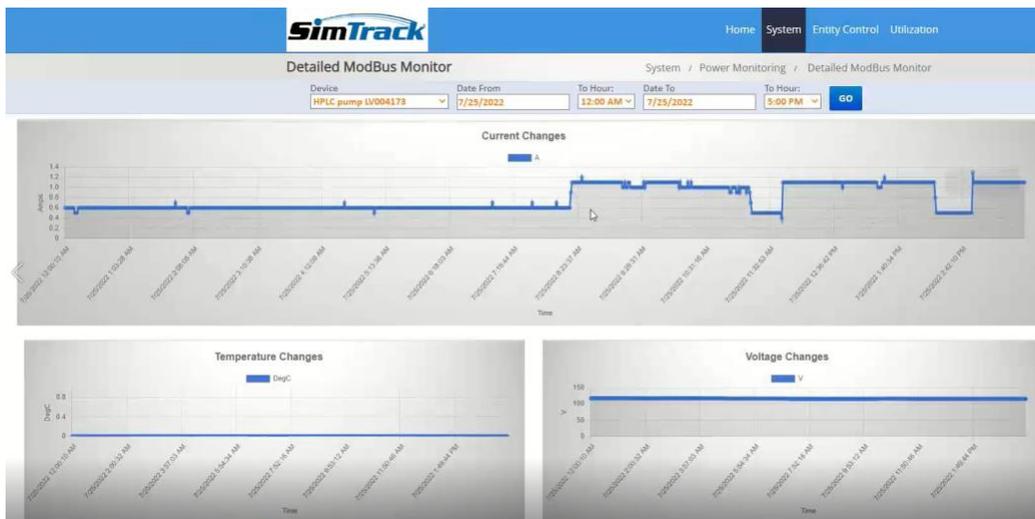

### Monitor Bus

Displays fluctuation in current for a specific device, selected from the *Modbus* dropdown menu. Changes in amperage, voltage, and temperature are displayed for each unit, if applicable.

### Detailed ModBus Monitor

Displays fluctuations in amperage, voltage, and temperature from a user-defined date and time range. The values on the y-axis which determine idle and usage status are configured on each device.

# Packet Power

## Registering a Device

PACKET POWER EG System OK © 2022-07-25 16:10:21

### System status

**General**

- System firmware: 1.19.4
- Radio firmware: 27.12-E1AF334
- GUID: C5E4-0000-0000-05C9
- Radio zone: US.1 (201420BF)
- System time: 2022-07-25T21:10:19Z
- Up-time: 13 d 01:41:26
- Hostname: PacketPower-C5E4-0000-0000-05C9
- IP address: 10.246.116.89
- MAC address: 04:79:b7:a3:7c:6e

**Stats**

- Memory: 80% used (102MB free)
- Persistent storage: 45.7% used (1.4 GB free)
- Transient storage: 0.513% used (31.8 MB free)
- Inbound ethernet data: 67.5 MB
- Outbound ethernet data: 1011.6 MB

**Licensed Features**

- Wireless Mesh
- Peer Gateways
- Modbus Server
- EMX

**Data Sources**

- Wireless Mesh  
View devices communicating to this gateway
- Peer Gateways  
Configure peer gateways

**Data Processing**

**Data Destinations**

- EMX Monitoring Data Feed  
Configure EMX monitoring data feed
- EMX Support Feed  
Configure EMX support feed
- Modbus  
View data exposed via Modbus/TCP

To register a new device, select the *Data Destinations* dropdown menu, then *Modbus* and *Node Map*.

### Modbus Node Map

Node	Slave ID (0-254)	Modbus Map	Register Offset	Register window	Readings
0B00-0000-0001-C220	9	2ndMap Copy	0	199	
2A00-0000-0001-C21A	3	PacketPower Standard Map (v.1.	0	199	
3200-0000-0001-6BD9	1	PacketPower Standard Map (v.1.	0	199	
3900-0000-0001-C21D	4	PacketPower Standard Map (v.1.	0	199	
4C00-0000-0001-C219	6	PacketPower Standard Map (v.1.	0	199	
B200-0000-0001-C222	8	2ndMap Copy	0	199	
B500-0000-0001-C216	7	PacketPower Standard Map (v.1.	0	199	
BE00-0000-0001-6BD2	2	PacketPower Standard Map (v.1.	0	199	
D400-0000-0001-C221	5	2ndMap Copy	0	199	

Page 1 of 1 25 1 - 9 of 9

Add New Item

Select the icon to add a new item.

**Add New Item** [Close]

**Node:**

**Slave ID (0-254):**

**Modbus Map:**  [v]

**Register Offset:**

**Register window:**

*Node* is the identifier for the Node.

*Slave ID* must be unique, and will correspond to the *ModBus ID* on the SimTrack portal. Care must be taken to not enter a duplicate, as this will override the previous entry.

*Register Offset* must be set to 0, and *Register window* must be set to 199.

Select *Add* to register the item.

### Add New Entity

Badge/Description:	<input type="text" value="Enter Badge #"/>	AbbVie ID:	<input type="text" value="Employee ID"/>
UPI/Asset:	<input type="text" value="UPI/Asset Tag"/>	Tag ID:	<input type="text" value="Auto-Generated"/>
Type: *	<input type="text"/>	Home Location: *	<input type="text"/>
Date Issued:	<input type="text" value="2022-04-13"/>	Expires On:	<input type="text" value="2024-04-13"/>
Entity Description:	<input type="text" value="EntityDesc"/>	Modbus:	<input type="text"/>
Upload	<input type="button" value="Choose Files"/> No file chosen		
Idle Current	<input type="text"/>	% Current Variation	<input type="text"/>
Idle Minutes to 0 Utilization	<input type="text"/>	Utilized Current	<input type="text"/>

The Modbus will now be listed under the *Modbus* dropdown menu. Select *Add New Entity* to add the entity. The entity is now available for tracking under *Utilization*.

## Home Location

Displays a list of all locations. Select *Update* in a location's row to modify that location.

## Updating Entities

Select *Update* in an entity's row to update the entity. The value in the *Tag ID* field is what is written to the RFID device. The *Modbus* field refers to the parent which is providing the entity with power utilization data.

The *Upload* field allows an image to be uploaded for display.

The *Idle Current*, *% Current Variation*, *Idle Minutes to 0 Utilization*, and *Utilized Current* fields are where current levels are defined.

- *Idle Current* defines the current level when the device is not in use.
- *% Current Variation* defines acceptable current variance, expressed as a percentage.

- *Idle Minutes to 0 Utilization* defines the time, measured in minutes, that the device must be at the *Idle Current* level in order to be considered not in use.
- *Utilized Current* defines the current level when the device is in use.

### Update Entity

Badge/Description:	<input type="text" value="123456"/>	AbbVie ID:	<input type="text" value="123456"/>
